

IMO recruiting screening experiment

Full findings, unresolved omissions, and reviewer validation protocol
Life • Final expense • IUL • Fixed annuities

What the evidence establishes

The supplied PDFs contain 136 approved licenses. The reconstructed California Department of Insurance (CDI) search contains 1,705 unique licenses. All 136 approved licenses were found. Of the 1,569 omitted licenses, 202 currently show active general Life authority and need the most careful review; 1,367 do not show that authority.

Cohort	Count	Interpretation
Approved in supplied PDFs	136	Known membership; selection motive undocumented
Omitted, active general Life	202	Full person-by-person reviewer work queue
Omitted, other records	1367	1,347 qualification mismatches; 20 unverifiable qualification pages
Total reconstructed search	1705	A–Z first-initial search; deduplicated by license

Thirty-five omitted active-Life producers meet the earlier first-call profile. That is a useful discrepancy set, not proof of 35 mistakes. The original list could be incomplete, the reviewer could have applied an undocumented filter, or the public records could have changed.

Confidence and practical limits

Confidence is high in the recorded list membership and the extracted, dated public fields. Confidence is limited in explanations of the reviewer's intent. No percentage of historical decision accuracy can be justified yet. State Farm/Farmers is the only company exclusion explicitly confirmed by the user; the active-Life gate follows the stated recruiting target and needs reviewer ratification.

The workbook contains every license, direct source links, qualification dates/statuses, contacts, agencies, line-specific appointments, orders, sponsors, all observed concerns, a provisional screening result, and editable reviewer answers. An omitted label is preserved even when the provisional result is PASS.

How the test cohort was reconstructed

The source is CDI's public license lookup: <https://cdicloud.insurance.ca.gov/cal/> . Individual name search: <https://cdicloud.insurance.ca.gov/cal/IndividualNameSearch> . Each workbook row links to its exact LicenseDetail page; license number and individual ID must both be preserved.

A surname-only search exceeded the result limit. Searches using first-name initials A through Z returned 2,035 rows. Historical names and multiple matching aliases were deduplicated to 1,705 licenses. Cached detail pages were retrieved and checked for identity on October 8, 2026. No retrieval failures remain in this dataset. This establishes coverage of the reconstructed A–Z search, not a guarantee against unusual first-name initials or every possible search edge case.

The original PDFs are dated October 5, 2026: [Aguilar_Producers_Full_Detailed_Directory.pdf](#) and [Aguilar_Life_Producers_Recruiting_List.pdf](#). They are approval references, not instructions or proof of how the original search was performed. Their headings label 7 WFG, 33 Primerica, and 96 affiliation-unidentified producers. Current relationships identify WFG for 9 approved and Primerica for 42 approved. Unidentified does not mean independent.

Three distinct quantities

Historical label: approved or omitted from the supplied PDFs. Public fact: the qualification/contact/relationship displayed on the check date. Screening judgment: PASS, FAIL, or REVIEW under the provisional playbook. Keep all three separately; none substitutes for another.

Current CDI facts may differ from facts on the selection date. One approved producer has a PDF phone but no current displayed phone. One approved producer is currently nonresident. Twenty detail pages provide no qualification information and require verification; one bail-agent detail page has a blank name, so the workbook uses its search-result name and labels that source. A retrieved page is not necessarily complete evidence.

What license pages cannot establish

They do not establish sales volume, actual final-expense/IUL/fixed-annuity production, interest in joining, contract exclusivity, release requirements, ownership of a book, or carrier appointment eligibility for a new IMO. A carrier name or Life appointment is an alignment signal, not product-level proof. Publicly reported languages are retained; no language or ethnicity is inferred from a surname.

Observed factors and what they do—and do not—explain

Counts below compare all 136 approved active-Life producers with all 202 omitted active-Life producers. Factors overlap and must not be summed as distinct rejection reasons.

Factor	Approved	Omitted	Meaning
Current CDI phone	135	93	Operational reachability; one approved PDF-only phone
California resident baseline	135	153	Strong pattern, but approved nonresident exception
State Farm / Farmers	0	17	User-confirmed exclusion
WFG relationship	9	9	Positive target segment; omissions remain
Primerica relationship	42	20	Positive target segment; omissions remain
Bank / securities agency	0	20	Channel hypothesis; no proven exclusive contract
Career / member-channel marker	0	10	Contract/portability verification
Benefits-broker agency marker	0	6	Retail target-product activity unestablished
Only A&H/disability appointments	0	4	Life authority exists; displayed appointments differ
Selected health-carrier-only Life mix	2	13	Approved exceptions; product inquiry
P&C-skew heuristic	2	20	Approved exceptions; ask actual Life activity
Active Property/Casualty authority	6	44	Blanket exclusion contradicted
Variable authority	4	31	Blanket exclusion contradicted
Order requiring further review	1	2	Actual current terms need inspection
Sponsor relationship	1	14	Qualification-specific; not a universal employer
No agency or insurer displayed	25	32	Business activity and independence unknown

Marker sets are transparent heuristics, not an exhaustive industry taxonomy. “Health-only” means appointments exclusively for A&H/disability; it must not be conflated with simply having no direct Life insurer appointment. Tenure in the reachable CA-Life cohort has medians of 2.5 years approved and 7.0 years omitted; this does not establish a cutoff or causation.

Provisional pass / fail playbook

1. Verify identity and general Life authority

Use license number; inspect the Life qualification's own status. Verified absence of active general Life is FAIL for this pool. Unavailable or unverifiable records are REVIEW. Funeral/burial-limited authority gets a separate pool if requested.

2. Apply the confirmed company exclusion

Established current State Farm/Farmers relationships are FAIL. Confirm company scope with the reviewer. Foremost alone is not an automatic Farmers rejection because approved examples have Foremost appointments.

3. Resolve contact, geography, product, channel, and order issues

Use REVIEW for missing/indirect contact, outside-California scope, bank/career/benefits/Allstate channels, unclear health/P&C product focus, and material orders. Record every applicable issue; do not present any of them as a confirmed historical reason.

4. Pass the observable screen

Active general Life, usable contact, suitable geography, no confirmed exclusion, and no unresolved screen issue produces provisional PASS. Keep actual PDF approval separately. No displayed affiliation is not itself failure; ask about business activity.

5. Keep context out of hard exclusions

P&C or variable authority, tenure, upcoming renewal, languages, carrier count, and qualification-specific sponsors do not alone cause FAIL. Resolved disciplinary history is not automatically a current restriction.

Strict playbook result	Approved	Omitted active Life
PASS	127	35
REVIEW	9	150
FAIL	0	17

The strict playbook is more conservative than the earlier first-call ranking: it holds PDF-only contacts and unresolved distribution details for REVIEW. The 35 first-call candidates remain the discrepancy queue, not a certified or newly approved list. The workbook includes both results so this difference is visible.

Approved controls that prevent over-rejection

Audit approved people with apparent concerns before turning a correlation into a hard rule. These eight approvals fall outside the earlier normal first-call profile; their actual approvals must remain intact.

Approved person / license	Observed issue requiring an explanation
AGUILAR DANI OSWALDO 0F45073	Toll-free business number: verify that it reaches the individual rather than a central office.
AGUILAR JONATHAN ANTONIO 0J07262	P&C/Personal Lines authority without displayed core Life appointments; mixed profile requires review.
AGUILAR MARIO STEVEN 0E87078	Life appointments shown only at selected health-oriented carriers; core Life activity unestablished.
AGUILAR MARTIN ROBERT 0N15461	Review actual enforcement terms before prioritizing contracting; prior approval is retained.
AGUILAR PARALUMAN ARLENE 0H75069	Toll-free business number: verify that it reaches the individual rather than a central office.
AGUILAR RAMIRO 4192130	Outside CA-resident baseline; retain actual prior approval and confirm scope.
NAVA VICKY 4051310	P&C/Personal Lines authority without displayed core Life appointments; mixed profile requires review.
AGUILAR MARTINEZ YOHOMARA 4494923	Life appointments shown only at selected health-oriented carriers; core Life activity unestablished.

Additional controls: six approved producers have active Property/Casualty authority; four have variable authority. Jessica Alejandra Aguilar (0J10393) has P&C relationships plus American General and Southwest Life. Approved AAA, Guardian, health-carrier, and removed-restriction examples preclude treating those observations as universal disqualifiers.

For each control, ask whether the trait is acceptable, conditionally acceptable, an explicit exception, or a later record change. If the proposed rule rejects a positive control, revise the rule or document the reviewer-authorized exception—do not silently relabel the approved person.

Unexplained first-call omissions • 1 of 3

Each person below has active general Life, a collected business phone, a California baseline, and no impediment in the earlier first-call ranking. The reviewer must supply the actual omission reason or correct membership. These are hypotheses to investigate, not new approvals.

Omitted person / license	Useful signal and unresolved point
AGUILAR ABNER SEBASTIAN 0M53678	Direct Life portfolio; inspect agency and product mix Mixed P&C; approved analogues exist
AGUILAR ALBERT ANTHONY 0D24082	Primerica Actual target-product production unknown
AGUILAR ARMANDO CARLOS SR 0606309	Direct Life portfolio; inspect agency and product mix Mixed P&C; approved analogues exist
AGUILAR BELTRAN JESUS EMMANUEL 4507229	Direct Life portfolio; inspect agency and product mix Actual target-product production unknown
AGUILAR CIRO 0B21429	Primerica Mixed P&C; approved analogues exist
AGUILAR DAVID OSCAR 0E94914	Primerica Actual target-product production unknown
AGUILAR ERIK JOHN 4067342	No displayed affiliation Actual target-product production unknown
AGUILAR ERIKA SHANEA 4575418	Primerica Actual target-product production unknown
AGUILAR ESTEVAN ARNULFO 4526717	WFG Actual target-product production unknown
AGUILAR EVA 0H80279	Primerica Mixed P&C; approved analogues exist
AGUILAR FRANCKY 4237704	Direct Life portfolio; inspect agency and product mix Actual target-product production unknown
AGUILAR JOHN RAYMOND 0510531	Direct Life portfolio; inspect agency and product mix Actual target-product production unknown

The workbook provides exact appointment names, dates, contact information, source links, all additional flags, and a reviewer decision field for these and every other producer.

Unexplained first-call omissions • 2 of 3

Each person below has active general Life, a collected business phone, a California baseline, and no impediment in the earlier first-call ranking. The reviewer must supply the actual omission reason or correct membership. These are hypotheses to investigate, not new approvals.

Omitted person / license	Useful signal and unresolved point
AGUILAR JORGE ANTONIO 0C18048	Direct Life portfolio; inspect agency and product mix Actual target-product production unknown
AGUILAR JOSE CONSTANTINO 0640919	No displayed affiliation Actual target-product production unknown
AGUILAR LYDIA JACQUELINE 4409571	Direct Life portfolio; inspect agency and product mix Actual target-product production unknown
AGUILAR MARQUEZ LAURA 4470047	Primerica Actual target-product production unknown
AGUILAR NESTOR DANIEL 0M59665	Direct Life portfolio; inspect agency and product mix Mixed P&C; approved analogues exist
AGUILAR PADILLA LINDA LETICIA 4310704	No displayed affiliation Variable authority; not an exclusion
AGUILAR ROBLES MARTHA ISABEL 4200766	Direct Life portfolio; inspect agency and product mix Actual target-product production unknown
AGUILAR ROGELIO A JR 0M68645	Direct Life portfolio; inspect agency and product mix Actual target-product production unknown
AGUILAR ROJAS ESTEFANI DE LOS ANGEL 4537640	Direct Life portfolio; inspect agency and product mix Actual target-product production unknown
AGUILAR ROMMEL ESPEJO 0710867	Direct Life portfolio; inspect agency and product mix Actual target-product production unknown
AGUILAR SALVADOR 0L70688	Direct Life portfolio; inspect agency and product mix Actual target-product production unknown
AGUILAR SANDRA KELLY 0B57792	Direct Life portfolio; inspect agency and product mix Actual target-product production unknown

The workbook provides exact appointment names, dates, contact information, source links, all additional flags, and a reviewer decision field for these and every other producer.

Unexplained first-call omissions • 3 of 3

Each person below has active general Life, a collected business phone, a California baseline, and no impediment in the earlier first-call ranking. The reviewer must supply the actual omission reason or correct membership. These are hypotheses to investigate, not new approvals.

Omitted person / license	Useful signal and unresolved point
AGUILAR SANTA AURORA 4004632	Direct Life portfolio; inspect agency and product mix Actual target-product production unknown
AGUILAR SCOTT JACOB 0J23783	Direct Life portfolio; inspect agency and product mix Actual target-product production unknown
AGUILAR SOFIA AMELIA 4494557	Primerica Actual target-product production unknown
AGUILAR SPENCER J 4008613	No displayed affiliation Actual target-product production unknown
AGUILAR STELLA VANESSA 0K51079	No displayed affiliation Actual target-product production unknown
AGUILAR STEVIE MARIE 0I35024	No displayed affiliation Actual target-product production unknown
AGUILAR SUSANA 1894766	Direct Life portfolio; inspect agency and product mix Actual target-product production unknown
AGUILAR VANESSA FRANCES 4423845	Primerica Actual target-product production unknown
AGUILAR-FLORES EUTIQIO 0N07212	Primerica Actual target-product production unknown
DUNCAN SISTA ANGELICA 0E39992	Direct Life portfolio; inspect agency and product mix Actual target-product production unknown
WUENCE QUERUBINA HAYDEE 0B03437	Direct Life portfolio; inspect agency and product mix Mixed P&C; approved analogues exist

The workbook provides exact appointment names, dates, contact information, source links, all additional flags, and a reviewer decision field for these and every other producer.

How to resolve all omissions and validate the rules

Adjudicate membership before modeling it

First establish whether all search results were actually reviewed. “Not previously reviewed” is a distinct answer, not a rejection. If the original search universe was smaller, record its boundaries; omitted positives can then be search-coverage misses instead of policy exceptions.

Review the entire active-Life queue

Fill the amber fields in “Life review” for all 338 rows: 202 omissions plus 136 approved controls. Start with the 35 unexplained first-call candidates, then other omissions, then approved exceptions. Reviewer choices: Approve, Reject, Defer, or Not reviewed. Every Reject needs the actual reason and evidence; every Defer needs the missing fact.

Confirm the other-license group without inventing motives

The “Other licenses” sheet includes all 1,367 records: 1,347 verified qualification mismatches plus 20 records with no qualification information. Resolve those 20 REVIEW records individually. The reviewer can affirm the mismatch gate in bulk after checking representative and limited-authority records. Preserve unknown historical motive and explain individual overrides.

Turn answers into testable rules

For each confirmed reason, record rule ID, triggering fields, decision, scope, threshold if any, exceptions, confirmation date, and examples. Separate eligibility failure from contact enrichment, territory hold, and product/channel inquiry. Never use an inferred exclusive contract as a hard rule.

Reconcile contradictions

An omitted producer acceptable under confirmed rules becomes a correction candidate. An approved producer failing a proposed rule requires a rule revision, explicit exception, or dated change explanation. No unexplained rejected row should be counted as successfully modeled.

Test on a new cohort

Freeze this dataset and the adjudicated rule version. Use a different surname as a prospective holdout and have the reviewer label it independently before seeing the model result. Report agreement, false rejections, false approvals, review rate, and unresolved cases using only adjudicated labels. Do not report the current in-sample ranking as predictive accuracy.

Ready-to-scale condition: all active-Life omissions and positive-control conflicts resolved; rule definitions approved; a new-cohort test completed; and every future exclusion traceable to dated evidence and a confirmed rule. Unresolved cases remain REVIEW.

Short question list for the original reviewer

Please use these questions to confirm the playbook, then return the completed workbook. Our objective is to reproduce your intended screen and identify any missed acceptable producers, rather than rationalize the list after the fact.

1. Completeness

Did you review every surname-search result, or was the approved list a handpicked subset? Were any first-name initials, cities, or pages skipped?

2. Life authority

Is active general Life authority mandatory? Should funeral/burial-limited producers have a separate recruiting pool?

3. Company exclusions

Which exact State Farm/Farmers relationships cause rejection? Do you exclude affiliates such as Foremost, or only named relationships? Approved examples have Foremost appointments.

4. Other channels

Are bank/securities, New York Life career, Northwestern, Knights of Columbus, Thrivent, Allstate, and benefits-broker profiles rejected, conditional, or acceptable? What evidence establishes the rule?

5. Contact and territory

Is missing contact information a rejection or an enrichment task? Are central/toll-free numbers acceptable? Is California residency required? Ramiro (4192130) is an approved nonresident exception.

6. Product mix

Do you exclude health-focused or P&C-focused producers, or accept anyone with active Life authority? What evidence must establish final expense, IUL, or fixed-annuity activity?

7. Other filters

Do tenure, variable authority, renewal timing, agency/sponsor relationships, or licensing orders affect the decision? State each threshold and exception.

8. Corrections

For every omitted active-Life producer: approve now, reject with the actual reason, defer with the missing fact, or mark not previously reviewed. Start with the 35 unexplained first-call candidates.

For each person, return: Approve / Reject / Defer / Not reviewed; the actual reason; the source or unrecorded fact; and your name/date. Please explicitly identify corrected omissions and authorized exceptions. No outreach or messages have been sent as part of this analysis.
