

Reviewer checklist

Aguilar test cohort • Evidence checked October 8, 2026

Target: Life, final expense, IUL, and fixed annuities

136 approved • 202 omitted with active general Life • 1,367 other omitted licenses. Start with the 35 unexplained first-call candidates; also verify the 20 other records with missing qualification information.

1. Completeness: Did you review every surname-search result, or was the approved list a handpicked subset? Were any first-name initials, cities, or pages skipped?

2. Life authority: Is active general Life authority mandatory? Should funeral/burial-limited producers have a separate recruiting pool?

3. Company exclusions: Which exact State Farm/Farmers relationships cause rejection? Do you exclude affiliates such as Foremost, or only named relationships? Approved examples have Foremost appointments.

4. Other channels: Are bank/securities, New York Life career, Northwestern, Knights of Columbus, Thrivent, Allstate, and benefits-broker profiles rejected, conditional, or acceptable? What evidence establishes the rule?

5. Contact and territory: Is missing contact information a rejection or an enrichment task? Are central/toll-free numbers acceptable? Is California residency required? Ramiro (4192130) is an approved nonresident exception.

6. Product mix: Do you exclude health-focused or P&C-focused producers, or accept anyone with active Life authority? What evidence must establish final expense, IUL, or fixed-annuity activity?

7. Other filters: Do tenure, variable authority, renewal timing, agency/sponsor relationships, or licensing orders affect the decision? State each threshold and exception.

8. Corrections: For every omitted active-Life producer: approve now, reject with the actual reason, defer with the missing fact, or mark not previously reviewed. Start with the 35 unexplained first-call candidates.

Per-person response: Approve / Reject / Defer / Not reviewed + actual reason + evidence + reviewer/date.

Correct any acceptable omissions. Explain approved exceptions before adding a hard exclusion.

Current safe screen: verify active general Life; exclude confirmed State Farm/Farmers relationships; REVIEW unresolved channel/product/contact/territory/orders; PASS only when no screen issue remains. PASS does not mean historical approval.
